SUPPORT GROUP

AIxUX Summit

Event Date: December 10, 2025

Chat Management: Tone, Monitoring & Moderation

Tone: Warm, professional, inclusive, and jargon-free. Model genuine curiosity and make attendees feel heard.

Monitoring: Scan chat continuously. Flag spam, harassment, technical issues, and off-topic content. Watch for question patterns and confusion points.

Moderation Standards:

- **Remove:** Hate speech, harassment, explicit content, spam, external links
- **Redirect:** Off-topic questions, sales pitches ("Great question—that's outside our scope, but reach out offline")
- **Highlight:** Thoughtful questions and valuable attendee insights

During Sessions

- Actively solicit questions from attendees ("What questions are coming up for our speaker?")
- Review incoming questions for relevance, clarity, and interest level
- Synthesize similar questions into one clear ask to save speaker time
- Prioritize questions that serve the broader audience (not niche/personal topics) to protect speaker time
- Deliver questions with proper context when helpful ("This ties back to your earlier point about...")

Troubleshooting & Support

- Provide immediate technical support in chat: "Audio cutting out? Try refreshing your browser or rejoining the session."
- Escalate critical platform issues to Danny immediately (speaker unable to present, platform crash, security breach)
- Collect details on technical problems: browser type, error messages, timestamp
- Know the difference between attendee tech issues (help in chat) vs. speaker tech issues (escalate)
- Document recurring issues for post-event analysis
- Have a backup communication plan if main chat fails (email, WhatsApp group, etc.)

Common Issues & Responses:

- "Can't see slides" → Suggest full screen, browser refresh, or switching devices
- "Audio feedback/echo" → Mute your microphone, use headphones instead of speakers
- "Platform lag" → Refresh browser, check internet connection, rejoin session
- "Recording not working" → Escalate to Danny immediately
